## Preface

Well beyond the framework of generative grammar, a central question of linguistic research is whether, or how, certain aspects of meaning influence the form of a sentence. This question is addressed from a lexical perspective in this book. It is assumed that a verb is lexically associated with information that determines, at least in part, the predicate-argument structures it can appear in. The lexical approach raises a set of basic questions. First, there is a *properties problem*: which kind of lexical information enters into the determination of argument structure? Second, there is an *interface problem*: how are the relevant chunks of information encoded, such that they are accessible to both general cognition, and the derivation of syntactic predicate-argument structures? Third, there is a *mapping problem*: how exactly are lexical-semantic properties translated into grammatical functions?

The first two questions are addressed in chapter one, which concludes with an introduction to the *Theta System* of Reinhart (2000) and subsequent work. Rather than decomposing verb-meanings into complex lexical event structures, the Theta System analyses thematic roles like *Agent*, *Theme*, *Experiencer* into clusters of two binary features, which are labeled *c* (for *cause change*) and *m* (for *mental contribution*). Chapter one explores the psychological basis of these features and identifies them as expressing agency in two domains of a modular mind: a *commonsense theory of body movements (folk physics)*, and a *commonsense theory of mind mechanisms (folk psychology)*. Every verb classifies the participants in the event, state, or process it denotes with respect to the cognitive domain in which it is to be interpreted, and it specifies whether the event participant is an agent or a patient in that domain. The Theta System thus derives exactly eight thematic roles as (possibly underspecified) clusters [*ac*, *βm*].

This notation answers the first two questions posed above, the *properties problem*, and the *interface problem*. The grammatically relevant property of verb meaning is agency in two crucial domains of cognitive event interpretation, *folk physics* and *folk psychology*. Encoded as clusters of binary features, this information is accessible in grammatical derivations by hypothesis. The third question regarding the mapping of lexical semantic information on syntactic functions is addressed on the basis of German data in chapters two, three and four.

Chapter two lays the empirical basis with a detailed description of a set of German verbs. The chapter first develops the routines that allow us to postulate specific role-clusters for a given verb, and then establishes generalizations about the relation between role configurations and corresponding predicate-argument structures, including diathesis alternations. The overall conclusion is that Reinhart's (2000, 2002) theory is accurate in most cases.

Although the generalizations of the Theta System are robust and most probably universal, they are by no means exhaustive. A number of non-semantic factors enter into the determination of syntactic structures, in particular morpho-phonology, and purely syntactic requirements like structural case. These issues are addressed in chapter three.

Starting with a discussion of morphological conditions on argument structure, the chapter develops a theory of parallel grammatical derivation, in which the notion *interpretation at the interface* is formalized as a homomorphic mapping. Objects of prosodic structure are interpreted by a mapping into syntax, and objects of syntactic structure are interpreted by a mapping into semantics.

The relation between lexicon and grammar is not an interface in this technical sense. It is assumed with Chomsky (1995) that a lexical item enters a grammatical derivation together with all of its features by being selected into an initial array. Empirical problems relating to the mapping of lexical semantic structure into syntactic structure simply do not arise in this theory, because there is no syntactic structure in the lexicon.

Once a lexical item has been selected into an initial array, its features no longer form an un-analyzable unit. Generalizations over argument-linking are formulated in terms of merging instructions for thematic role-clusters. In general, the thematic roles provided by a lexical verb-entry merge with syntactic heads of category  $[-N]$ , and they are assigned to  $[-V]$ . In particular, a  $[+]$  cluster must merge with the head  $v$  (which introduces external arguments), and the fully specified cluster  $[-c-m]$  must merge with  $V$ . No reference to arguments needs to be made in these merging instructions. The argument-interpretation of a given noun phrase arises exclusively in configuration with a thematic role-assigning head. This is an important feature of the present theory, which distinguishes it sharply from the event decomposition framework. It is possible to make explicit generalizations on how the perception of predicate-argument relations determines the projection of syntactic argument structure, but no recursive, pre-syntactic system of event-representation is needed to do that. With the constructional approach, the present theory shares the assumption that a noun

phrase can only receive an argument-interpretation, if it appears in a specific syntactic configuration. It sharply differs from the constructional approach in that it explains why and how the thematic role-assigning potential of any given construction depends on the lexical entries, from which it is projected.

Chapter four extends this approach, pursuing the interaction between lexical specification, morphological markedness, syntactic structure, and semantic interpretation. It discusses the present participle, modal infinitival complements to the auxiliaries *haben* 'have' and *sein* 'be', the erratic auxiliary selection of intransitive manner of motion verbs, verbal and adjectival properties of the second participle, *un*-prefixation, verb-particle constructions, the verbal passive, and auxiliary selection in perfect, passive and future constructions.

This book contributes to the larger research project of the Theta System in three areas. First, it supplies a cognitive-psychological foundation for the coding system, the features *c* (cause change), and *m* (mental contribution). Second, it extends the Theta System into a general theory of argument projection by formalizing the relation between lexical access, morphological markedness, and syntactic argument structure. Third, it explores a wide range of data from German, which have not been discussed in this framework before.

# Contents

## CHAPTER 1

### FROM LEXICAL SEMANTICS TO COGNITIVE PSYCHOLOGY, AND BACK

AGAIN .....	1
1. Lexical semantics: an overview .....	1
1.1. Thematic role lists.....	2
1.2. Roles and events.....	5
1.2.1. The localist approach.....	5
1.2.2. The aspectual approach.....	7
1.2.3. The causal approach .....	9
2. The mapping procedure .....	11
2.1. Beyond the UAH.....	15
2.2. Problems with diathesis alternations.....	16
2.3. Summary .....	17
3. The architecture of the mind, and the lexicon .....	18
3.1. The lexicon is a list: Fodor & Lepore .....	19
3.2. Domain specific thought: ToBy, ToMM, and agency .....	21
3.2.1. Physical objects and ToBy.....	22
3.2.2. Intentional agents and ToMM .....	23
3.3. Crossing the interface: cognition, syntax, and the lexicon .....	24
4. Reinhart's feature theory.....	27
4.1. The lexicon uniformity principle .....	28
4.2. Notational conventions .....	29
4.3. Feature clusters and verb classes .....	29
4.3.1. Underspecified causes: [+c].....	30
4.3.2. Agents: [+c+m].....	30
4.3.3. Manner verbs and indirect causation: [/+c], [+c-m] .....	31
4.4. The realization of thematic feature clusters.....	32
4.4.1. Marking.....	33
4.4.2. Merging.....	33
4.5. Arity operations and the like.....	34
5. Conclusion .....	37

## CHAPTER 2

### GERMAN VERBS: LEXICAL REPRESENTATION AND ARGUMENT REALIZATION.....

1. Introduction: features and roles .....	39
2. Role sets and realization patterns .....	42
2.1. Agent verbs: [+c+m] .....	42
2.1.1. Agent-patient verbs .....	42
2.1.2. Agent-instrument verbs .....	45
2.2. Underspecified causation: [+c] .....	49
2.2.1. Cause-theme verbs .....	50
2.2.2. Verbs of indirect and double causation .....	52
2.2.3. Cause and source .....	56
2.2.4. Cause and goal .....	58
2.3. Minder verbs: [+m] .....	60
2.3.1. Minder and represented object .....	60
2.3.2. Ditransitive minder verbs and the intentional alternation .....	62
2.3.3. Indirect causation in the mental domain: sensations .....	65
2.4. Special event verbs .....	67
2.4.1. Mixed value clusters .....	68
2.4.2. Transitive [-] verbs .....	69
2.4.3. Intransitive [-] verbs .....	72
2.5. Realization patterns .....	76
2.5.1. Agent verbs .....	76
2.5.2. Cause verbs .....	78
2.5.3. Minder verbs: [+m] .....	81
2.5.4. Special event verbs .....	83
2.5.5. Summary .....	86
3. The syntax of thematic alternations .....	86
3.1. Causation and morphological complexity .....	88
3.2. On the independence of morpho-syntactic and lexical complexity .....	92
3.3. Tests for the position of NP .....	93
3.3.1. Government-related tests .....	94
3.3.2. Constituency-related tests .....	96
3.3.3. Binding asymmetries .....	99
3.3.4. Attributive past participle .....	100
3.3.5. Impersonal passive .....	101
3.3.6. Auxiliary selection .....	101

3.4. The causative alternation .....	102
3.5. The intentional alternation .....	106
3.6. Transitive non-causatives.....	110
3.7. The instrumental alternation .....	113
3.8. Intransitive [-] Verbs.....	114
3.9. Intermediate conclusion .....	117
4. The reflexive alternation.....	117
4.1. Thematic roles in reflexive constructions.....	118
4.1.1. The <i>selbst</i> test .....	119
4.1.2. Agent verbs .....	122
4.1.3. Cause verbs.....	126
4.1.4. Minder verbs.....	136
4.1.5. Special event verbs .....	139
4.1.6. Summary of data .....	139
4.2. [+] reflexives assign their internal theta-role.....	140
4.3. Are theme-reflexives unaccusatives?.....	142
5. Conclusion .....	146

## CHAPTER 3

### A BARE PHRASE STRUCTURE OF ARGUMENT EXPRESSION.... 150

1. A new architecture: domains and interpretation.....	151
1.1. The role of overt morphology in argument projection: Borer (2003).....	151
1.2. A parallel architecture of grammatical derivation .....	156
1.3. More overt morphology: templates and features .....	158
1.4. Structure-building operations: merge and head-of.....	161
1.5. Mapping into syntax: the basic relations of X'-theory .....	163
1.6. Exemplifying the formalism: stem-derived causatives .....	165
1.7. Excursus: Grafts, parallel derivations and expressive power.....	168
2. Generating syntactic argument structure .....	172
2.1. Subcategorization and formal transitivity .....	172
2.2. Thematic roles in syntactic structure .....	175
2.3. Finite transitives.....	180
2.3.1. Dative and selected P.....	182
2.3.2. Double causatives .....	183
2.3.3. Decausativization by non-realization.....	185
2.3.4. Decausativization by role reduction .....	185
2.3.5. Minder verbs.....	187

2.3.6. Transitive [-] verbs.....	190
2.4. Intransitives.....	191
2.5. Reflexives.....	193
3. Conclusion.....	196

## CHAPTER 4

APPLICATIONS AND EXTENSIONS: PARTICIPIAL AND INFINITIVAL CONSTRUCTIONS.....	199
1. The present participle and modal infinitives.....	200
1.1. The present participle.....	200
1.1.1. Basic facts.....	200
1.1.2. Verbal properties.....	202
1.1.3. Adjectival participles.....	204
1.1.4. Preliminary observations about argument structure.....	205
1.1.5. Intransitives.....	206
1.1.6. Agents, causes, and double causation.....	207
1.1.7. Underspecified [-m] and cluster distinctness.....	208
1.1.8. Underspecified [-c].....	210
1.1.9. Underspecified [+m].....	212
1.1.10. Mixed value clusters.....	213
1.1.11. Summary.....	214
1.2. Modal Infinitives under <i>sein</i> 'be'.....	215
1.2.1. Basic facts.....	215
1.2.2. Intransitives.....	216
1.2.3. Agents, causes, and double causation.....	217
1.2.4. Underspecified [-m] and cluster distinctness.....	218
1.2.5. Underspecified [-c].....	219
1.2.6. Underspecified [+m].....	220
1.2.7. Mixed value clusters.....	221
1.2.8. Summary.....	222
1.3. Modal infinitives under <i>haben</i> 'have'.....	223
1.3.1. Intransitives.....	223
1.3.2. Agents, causes, double causation, and the causative alternation.....	224
1.3.3. Underspecified [-m] and cluster distinctness.....	225
1.3.4. Underspecified [-c].....	226
1.3.5. Underspecified [+m].....	227
1.3.6. Mixed value clusters.....	227
1.3.7. Summary.....	228

1.4. Morphology, syntax and ARB-interpretation .....	228
1.4.1. Against T in the participle, and under <i>sein</i> 'be' .....	229
1.4.2. Infinitives under <i>haben</i> 'have' are tensed.....	231
1.4.3. The position of <i>zu</i> , and its role in role-absorption.....	232
1.4.4. Arbitrarization and the interpretation of implicit roles.....	233
1.4.5. On the morpho-syntactic status of /n/ and /d/ .....	234
1.4.6. Derivations.....	235
1.5. Intermediate conclusion .....	238
2. Constructions with the second participle.....	239
2.1. Auxiliary selection, intransitive motion and lexical reflex- ivization.....	239
2.1.1. Motion verbs and lexical reflexivization.....	241
2.1.2. Formal vs. thematic features: deriving dialectal variation in auxiliary selection .....	243
2.2. The second participle .....	245
2.2.1. Verb sets .....	246
2.2.2. Verbal participles with an adjectival distribution.....	247
2.2.3. Morphology .....	249
2.2.4. Verbal vs. adjectival participles.....	251
2.2.5. Phrasal vs. lexical participles.....	252
2.3. The verbal passive.....	258
2.3.1. Aspectual constraints .....	258
2.3.2. Thematic constraints .....	260
2.3.3. Impersonal passives .....	263
2.4. Auxiliary and participle: the overall picture .....	264
2.4.1. <i>Sein</i> 'be' .....	265
2.4.2. <i>Haben</i> 'have' .....	266
2.4.3. <i>Werden</i> 'become/be' .....	267
3. Conclusion .....	269
CONCLUSION .....	273
