“This elegant and thorough text will take the reader through many of the advances in linguistic semantics during the past 25 years of generative grammar. It is a fine achievement by two of the most prominent researchers, and teachers, of the subject.”

James Higginbotham, University of Oxford

“This book shows that natural language semantics has reached its maturity. A careful and enlightening discussion guides the reader through the intricacies of argument structure, quantification, and binding, some of the very central topics in semantics and in the syntax/semantics interface. Traditional techniques from logic are presented in a way aimed at bringing out what is really important to the study of language. An excellent introduction for the linguist-to-be.”

Gennaro Chierchia, University of Milan

“This superb new introduction to formal semantics in linguistic theory helps and invites the serious beginner to think through arguments among potential alternatives right from the start. It’s a great textbook.”

Barbara Partee, University of Massachusetts

Written by two of the leading figures in the field, this is a lucid and systematic introduction to formal semantics as applied to transformational grammars of the Government-Binding model. It covers the fundamental constructions thoroughly with analyses, also going well beyond that to provide extensive discussion of quantification, binding and anaphora, and ellipsis.

With exercises and guides to further reading, the volume will be a key text for graduate and advanced undergraduate introductory courses in semantics.

Irene Heim and Angelika Kratzer

Irene Heim is Professor of Linguistics at the Massachusetts Institute of Technology. She is the author of *The Semantics of Definite and Indefinite Noun Phrases* (1987) and, with Angelika Kratzer, is Founder and Editor of *Natural Language Semantics*.

Angelika Kratzer is Professor of Linguistics at the University of Massachusetts at Amherst and, with Irene Heim, is Founder and Editor of *Natural Language Semantics*.
